Document your journey in cybersecurity.

1. It can be used as a reference while looking for new opportunities.
2. It can help you retain information that you're learning.
3. It can help you solve issues that you've faced in the past.
4. It can help others learn from your experience.
5. It helps provide you with an additional level of credibility.

You don't have to spend a lot of time and effort on it.

Simply make a short note whenever you learn or do something new.

Trust me, this will be very useful in the future.

A small personal website or blog is an ideal way to do it.

These are all free:

**1. Letterpad (<https://letterpad.app>)**

A good platform, for creating and launching a blog within a few minutes.

**2. Notion (<https://notion.so>)**

A free note-taking web application that has some great templates.

**3. Medium (<https://medium.com>)**

Another great platform for launching your own blog within minutes.

You don't have to compose lengthy posts or write-ups. In the past, I've published one-liners that have helped me solve problems.

I find it maintainable because I approach it with the mindset of creating a repository, rather than attempting to teach people new things.

This is mainly because I'm learning through verifying the information related to the topic and retyping it.

Hopefully this inspires someone to have a go at doing it.

👍👍👍 314

Wonderful idea 💡 [Daniel Kelley](#)!

I'm doing a mix of documenting going forward and reaching back to IT, Project Management and Software Development content, articles (IBM's Rational ezine and PMI chapters) and a small business newsletter I shared from 02-09. ...more

Love this. I would even compare it to building a knowledge baes in the moment that can be referenced at anytime. I have found this invaluable in regards to the time it can save. Second idea of notion as that has been my go-to for a while now.

One of the things I used to do was keep notes of new things I learned every day at my job. I think I need to get back into this habit!

I love this idea, it's almost like writing playbooks for yourself to refer back to. Good practice in general!

Some excellent guidance. One common question I get is how to get experience without working in the field. Documenting your labs and journey can fill this gap and demonstrate your skillset [Daniel Kelley](#) .
